EXPERIENCE

KQED

Junior Software Engineer

San Francisco, CA

Mar 2026 - Present

- Built two reusable content blocks that let editors update podcast and sponsor sections directly in WordPress, now used across 20+ program pages with changes appearing instantly and identically on the live site.
- Fixed a data isolation bug affecting 260K+ membership accounts, preventing sub-accounts from incorrectly inheriting data from primary accounts, per the Membership team's requirements.
- Built pagination for 1M+ pages on KQED.org using TypeScript and Redux, adding dynamic SEO tags, VoiceOver accessibility, and 404 handling to improve site navigation and SEO visibility.

Software Engineer Intern

Jul 2025 - Feb 2026

- Increased a file upload service's capacity by 25x (from 2 to 50+ requests/sec) by rewriting blocking database calls into a non-blocking request pipeline, eliminating timeouts under heavy load.
- Cut the team's API maintenance load by removing 27% of unused endpoints after auditing 100+ APIs across a microservices architecture (Spring WebFlux, Kafka event streaming) in Postman.

JKI INC

Field Application Engineer

Campbell, CA

Sep 2024 - Jan 2025

- Served as the technical liaison between the customer's engineering team and JKI product teams, collaborating cross-functionally to support hardware qualification of NAND flash memory products.
- Built a C++ test automation tool that runs full hardware validation with one command, and discovered an additional 17% safe operating voltage range that informed the customer's production qualification spec.

PROJECTS

CoffeeByMe | Production coffee discovery platform (US/KR, 1.1K+ MAU, 1.5K+ SKUs)

Technical Lead

Jul 2025 - Present

- Built a 3-stage AI-powered search pipeline (filtering, embeddings, Claude) and reduced response latency from 2.7s to 17ms using a custom caching layer, validated with 64K+ test requests using K6.
- Found that Spring's built-in flag for preventing duplicate cache loads silently did nothing on Redis, letting a 20-user cold-cache burst fire 10 duplicate Bedrock calls until per-key lock striping cut that to 1 (-90%).
- Traced repeated production boot failures to a corrupted Flyway migration history caused by a conflicting Hibernate ddl-auto setting, and then fully restored schema ownership to Flyway without data loss.

Pilm Camera | iOS dual-ratio camera with film presets on the App Store (3.2K+ downloads)

Solo Developer

Jul 2026 - Present

- Built a real-time pipeline that crops a single 4K camera feed into two selected aspect ratios and encodes both simultaneously via separate AVAssetWriter tracks, applying 35 film-style color presets consistently.

AWARDS

1st Place - AI Sports, IBM SkillsBuild: NBA AI Platform with LLM chatbot (FastAPI + IBM Watsonx Granite) (2025)

1st Place - Perplexity, HackHayward: AI Medication Recommendation System (FastAPI + Perplexity) (2025)

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, C++, SQL, Swift

Frameworks & Architecture: Spring Boot, Spring WebFlux, Microservices, System Design, Distributed Systems, FastAPI, Node.js, React, Next.js, WordPress

AI / LLM: AWS Bedrock, Anthropic Claude API, Claude Code, OpenAI API, RAG Pipelines, Semantic Search, Vector Embeddings, Context Engineering, Eval Design, Multi-Agent Orchestration

Cloud & DevOps: AWS (EC2, RDS, Bedrock, VPC), GCP, Docker, CI/CD (GitHub Actions), Nginx, Cloudflare R2

Databases & Tools: MySQL, MongoDB, Firebase, Redis, Kafka, REST APIs, Git, Postman, Jira

EDUCATION

San Jose State University

B.S. in Software Engineering

San Jose, CA

Aug 2021 - Dec 2025
