EXPERIENCE

KQED

San Francisco, CA

Junior Software Engineer

Mar 2026 - Present

- Fixed a production page-loading bug affecting users on KQED.org (900K+ monthly visitors) by tracing a broken cache lookup that silently returned empty data, and restoring the affected pages from a 100% failure rate to fully functional (React Redux).
- Moved mobile app credentials from plaintext config files to a managed, encrypted vault (GCP Secret Manager), removing exposed secrets across 3 internal services and aligning the deployment process with security best practices.

Software Engineer Intern

Jul 2025 - Feb 2026

- Increased a file upload service's capacity by 25x (from 2 to 50+ requests/sec) by rewriting blocking database calls into a non-blocking request pipeline, eliminating timeouts that previously occurred under heavy load (Spring WebFlux).
- Cut the team's API maintenance load by removing 27% of unused endpoints after auditing 100+ APIs across services in Postman and cross-referencing actual frontend usage

JKI INC

Campbell, CA

Application Engineer

Sep 2024 - Jan 2025

- Built a C++ test automation framework for NAND flash memory chips that runs full hardware validation (reset, power cycling, error rate checks) across configurable voltage levels with a single command, replacing the prior manual one-test-at-a-time workflow.
- Discovered an additional 17% safe operating voltage range through systematic testing, broadening the range under which the chip runs reliably and informing the customer's production qualification spec.

PROJECTS

CoffeeByMe (coffeebyme.com) | Lead Developer | Spring Boot, NextJS, AWS, GitHub Action Jul 2025 - Present

- Designed, built, and shipped an end-to-end, live, AI-powered coffee platform as the sole developer across separate US and KR market versions (v1 launched Jan 2026, v2 launched May 2026).
- Built a recommendation engine over 500+ curated coffee products using AWS Bedrock (Claude Haiku 4.5) for natural-language answers and Amazon Titan embeddings for semantic search.
- Built an automated data pipeline that scrapes roaster catalogs and uses an LLM to extract and normalize product details, turning unstructured web content into clean, searchable records.

AI Chatbot Test Automation Framework | Python, FastAPI

Oct 2025 - Dec 2025

- Built a Python framework that automatically tests AI chatbots (Claude, ChatGPT 3.5, ChatGPT 4) by feeding them a structured set of prompts and verifying that each response contains the expected keywords, thereby replacing manual review with repeatable regression tests.

AWARDS

1st Place, AI for Sports with NBA Platform with AI chatbot - IBM SkillsBuild AI Lab, 300+ teams (2025)

1st Place, Best Use of Perplexity with AI Medication Recommendation System - HackHayward (2025)

Top 10, SpartUp x Silicon Valley Small Business Development Center Pitch Jam (2025)

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, C++, SQL, Dart

Frameworks: Spring Boot, Spring WebFlux, FastAPI, Node.js, React, Next.js, Flutter

Cloud & DevOps: AWS, GCP, Docker, GitHub Actions, Spinnaker, Kubernetes

Databases & Tools: MySQL, MongoDB, Firebase, Supabase, Redis, REST APIs, Git, Postman, Jira, Helm

EDUCATION

San Jose State University

B.S. in Software Engineering

San Jose, CA

Aug 2021 - Dec 2025
